

ETERNA

GX SUPERYACHTS

In developing this 54m project, GX SUPERYACHTS has integrated our core values, such as sustainability and responsible yachting, which are an integral part of its DNA.

It is also remarkable that GX SUPERYACHTS has introduced the concept of well-being as a key pillar of the brand philosophy. This includes elements such as advanced air-treatment systems, high-quality water on board, and abundant natural light provided by large windows in both the main salon and the sky lounge.

ETERNA also features a dedicated fitness and well-being area, which can be connected either to the beach club or located on the sundeck, depending on the future Owner's preferences and lifestyle.

ETERNA features a spacious and vibrant beach area, representing one of the yacht's key features, as this is where owners and guests tend to spend most of their time. The beach club will be fully equipped with sunbeds, umbrellas, a mini pool, and opening side platforms, to name just a few of its features.

ETERNA reconnects the Owner with the original reason for buying a yacht and with the world around them, bringing people closer to the water once again. The main salon creates a seamless connection with the cockpit and beach area, almost like a large, integrated patio. It is conceived as an indoor-outdoor living environment, with materials, textures, and a mood that feel as natural and harmonious as possible.

Main Technical data

Model	GX52 ETERNA
Type	Full displacement, long-range motor yacht
Material	Aluminum alloy hull and superstructure
Intended use	Private yacht, with commercial/charter compliance available subject to final Flag and Class requirements
Exterior design and general arrangement	Too Design – Marco Casali Yacht Design
Hull material	Marine grade aluminium alloy, Class approved
Superstructure material	Marine grade aluminium alloy, Class approved
Length overall	54.00
Length waterline	51.00 m
Beam maximum	9.00 m
Design draught	2.30 m
Gross tonnage target	499 GT
Displacement	500
Cruising speed	12 knots
Eco speed	10 knots
Maximum speed	15 knots
Range at economical speed	4,500 nautical miles

All dimensions, weights, capacities, speeds, range, areas, maker names and systems are about and subject to final design development, weight calculation, tank arrangement, engineering, Class approval, Flag approval and Owner choices.

She can be delivered in 30 months from the keel laying and based on existing GX SUPERYACHTS engineering platform
